

# Epson Discproducer for professional high quality disc publishing

Epson introduces the Epson Discproducer, a rugged and compact integrated desktop disc duplication solution which can create from one to 100 copies of discs in a single batch with individualised content and labels.

With Epson's patented AcuGrip robotic technology, Discproducer's robotic arm greatly minimises the double-disc feeding problem and lifts and moves discs smoothly from station to station to prevent damage from sliding media.

It also includes a six colour inkjet printer that delivers impressive disc print quality and is more economical than other desktop disk publishers.

Developed with the same patented MicroPiezo inkjet technology featured in Epson's photo printers, the six individual colour large capacity ink cartridges can print more than 1,000 discs.

And each cartridge - Cyan, Light Cyan, Light Magenta, Magenta, Yellow, and Black - includes a low-ink sensor and LED to ensure that operators have adequate ink to complete a full run. As the cartridges are independent only single cartridges need to be replaced.

The Epson Discproducer has a high speed USB2.0 interface, and bundled software includes Total Disc Maker to initiate and manage jobs, and Total Disc Monitor which provides a continuous display of job status and active devices.

Discproducer is available for \$6,499 RRP.
